

School Services

Is the world of data protection and GDPR a mystery to you? Or an area you really don't want to concentrate your time and efforts on? We understand this, but it is a legal requirement and extremely important in primary education given the amount of confidential and sensitive information flowing through schools. We can help.

We can provide:

- Data protection advice and support in carrying out a school information audit
- What to do for information requests from data subjects
- Advice on securing your digital information and retention schedules

In addition, as a system user for the past seven years, we can provide advice and support on the Bromcom Management Information System.

Need to speak to someone quickly on data, information management or Bromcom, simply contact us.
